

Modular Vehicle Rail System For Vehicle

Abstract

A modular vehicle system for a vehicle is provided which includes one or more elongated modular members adapted to be coupled to an interior portion of a vehicle, where one or more removable articles are configured for attachment to one or more of the members and a utility system provides utilities to the articles. One or more holders are positioned to align with the members and are coupled to the articles for attaching the articles to one or more of the members. The articles are interchangeable across multiple different vehicles, including different vehicle models and makes.
